

FIRST STATE GLOBAL LISTED INFRASTRUCTURE FUND

Monthly Update

July 2019

Market review

Global Listed Infrastructure gained in July. An environment of geopolitical uncertainty and deteriorating economic growth was countered by falling interest rates and decent company results. The FTSE Global Core Infrastructure 50/50 index ended the month up 3.5% while the MSCI World index[^] ended the month 4.5% higher.

The best performing infrastructure sector was Towers (+4%). The sector continues to benefit from structural growth in demand for mobile data, as evidenced by strong Q2 results. Changes to industry structure in the US and Europe (outlined below) should continue to support the growth outlook. Toll Roads (+3%) gained on the appeal of their stable volumes and contracted pricing in a low interest rate environment.

The best performing infrastructure region was Australia (+4%) as government bond yields reached all-time lows, stimulating demand for income generating assets like toll roads and airports. Japan (+2%) also performed well as investors searched for value in a relatively expensive global equity market.

The worst performing sector was Ports (-4%) on increasing trade and political tensions between the US and China. An escalation of tensions with Iran in the Strait of Hormuz, a key shipping channel, also impacted sentiment towards global trade. This negative driver was reflected in the performance of Asia ex Japan (-2%).

Lower commodity prices and ongoing project delays produced a muted growth outlook for Pipelines (-3%) and reflected in the performance of Canada (-2%). Enbridge (-7%, Fund underweight) continued to be impacted by regulatory, political and permitting delays on its Line 3 Replacement and Line 5 pipelines. These issues highlight how challenging it has become to build new pipeline infrastructure, but also reinforce the value of existing assets in the ground.

Fund performance

The Fund returned +5.0% after fees in July¹, 149bps ahead of its benchmark index. Positioning within the Toll Road and Tower sectors aided relative performance. Overweight exposure to the UK and Japan were also positive drivers.

Annual Performance (% in GBP) to 31 July 2019

Period	12 mths to 31/07/2019	12 mths to 31/07/2018	12 mths to 31/07/2017	12 mths to 31/07/2016	12 mths to 31/07/2015
First State Global Listed Infrastructure Fund B GBP Acc	22.1	-0.2	12.9	31.6	9.8
FTSE Global Core Infrastructure 50/50 Index Net TR GBP*	20.5	2.7	11.5	27.8	8.7
MSCI World Net Total Return Index GBP	11.0	12.4	16.9	17.0	13.5

These figures refer to the past. Past performance is not a reliable indicator of future results. For investors based in countries with currencies other than the share class currency, the return may increase or decrease as a result of currency fluctuations

Performance figures have been calculated since the launch date. Performance data is calculated on a net basis by deducting fees incurred at fund level (e.g. the management and administration fee) and other costs charged to the fund (e.g. transaction and custody costs), save that it does not take account of initial charges or switching fees (if any). Income reinvested is included on a net of tax basis. Source: Lipper IM / First State Investments (UK) Limited.

*The benchmark changed from the UBS Global Infrastructure & Utilities 50-50 Index on 01/04/2015.

RISK FACTORS

This document is a financial promotion for First State Global Listed Infrastructure Fund for professional clients only in the EEA and elsewhere where lawful. Investing involves certain risks including:

– **The value of investments and any income from them may go down as well as up and are not guaranteed. Investors may get back significantly less than the original amount invested.**

– **Currency risk:** changes in exchange rates will affect the value of assets which are denominated in other currencies.

– **Single sector risk:** investing in a single sector may be riskier than investing in a number of different sectors. Investing in a larger number of sectors helps spread risk.

– **Charges to capital risk:** the fees and expenses may be charged against the capital property. Deducting expenses from capital reduces the potential for capital growth.

– **Listed infrastructure risk:** investments in infrastructure may be vulnerable to factors that particularly affect the infrastructure sector, for example natural disasters, operational disruption and national and local environmental laws.

Reference to specific securities or companies (if any) are included to explain the investment strategy and should not be construed as investment advice, or a recommendation to invest in any of those companies.

For a full description of the terms of investment and the risks please see the Prospectus and Key Investor Information Document.

If you are in any doubt as to the suitability of our funds for your investment needs, please seek investment advice.

¹ Performance is based on OEIC B share class, net of fees, expressed in GBP.

The best performing stock in the portfolio was SBA Communications (+9%). The US-based tower company delivered a strong Q2 result, supported by 6% growth in site leasing revenue, and raised the full year outlook. SBAC also initiated its first dividend and will continue to return cash to shareholders via share buybacks. Tower peers American Tower (+4%) and Crown Castle (+2%) were also positive contributors. The merger of telecom operators Sprint and T-Mobile presented a potential headwind for the Tower sector. The market welcomed the forced sale of customers and spectrum to DISH which should create an effective 4th operator and mitigate the risk of consolidation.

Toll roads delivered another positive month of performance. CCR (+9%) continues to participate in new growth projects and privatisations that will be needed to enable Brazil to meet its infrastructure needs. Transurban (+6%) rallied as the market was attracted to its growing dividend relative to low yields on Australian government bonds. The company also opened another section of its WestConnex project - the M4 Tunnels extend the M4 Motorway another 6km from Sydney's west towards the city. Ferrovial (+5%) continued to be driven by its concessions business with strong results from toll roads in Toronto and Dallas. Despite challenging weather conditions, 407-ETR in Toronto increased EBITDA* by 9% in the second quarter. The opening of a new section of road in Dallas resulted in EBITDA growth of 68% for Texas Managed Lanes. New lanes were also opened in Charlotte, NC during the period.

Gas utilities performed well including ENN Energy (+7%) in China and Tokyo Gas (+7%) and Osaka Gas (+7%) in Japan on continued strong demand from industrial and power generation customers. Falling wholesale gas costs should also support margins and profitability in the short-term.

US freight railroads delivered mixed performance in July. Union Pacific (+6%) beat market expectations for Q2 through strong pricing power and improved operating efficiency. The company reduced headcount by 8% in the quarter in response to a weaker volume environment and following the implementation of Precision Scheduled Railroading (PSR). In contrast, Norfolk Southern (-4%) disappointed the market. The company started to implement its version of PSR operations from July so we expect to see material cost improvements in the second half.

The worst performing stock in the portfolio was Williams (-12%) as very low gas prices forced a number of north-east US gas producers to reduce their growth outlook. While upstream economics will impact "supply-push" customers, there should still be demand for gas pipeline capacity from downstream "demand-pull" customers, underwriting the 5-7% long-term EBITDA growth outlined by the company. Dominion (-4%) underperformed as the market anticipated further delays to the Atlantic Coast Pipeline project as it seeks environmental permits.

UGI (-4%) announced the acquisition of Columbia Midstream from TC Energy for a relatively full multiple of 13x EBITDA. Management believe the gas gathering systems will complement the company's existing gas pipeline and storage assets, though markets remain sceptical on synergies and growth expectations. Cheniere (-5%) was impacted by market concerns that the US trade dispute with China and low Liquefied Natural Gas (LNG) spot prices would reduce the company's ability to sign long-term contracts at attractive rates. The company is expanding its LNG export projects at Sabine Pass and Corpus Christi from 6 to 9 trains.

Market outlook and Fund positioning

The Fund invests in a range of global listed infrastructure assets including toll roads, airports, ports, railroads, utilities, pipelines, and wireless towers. These sectors share common characteristics, like barriers to entry and pricing power, which can provide investors with the potential for inflation-protected income and strong capital growth over the medium-term.

The Fund is positioned with Toll Roads as its largest sector overweight. Transurban, Atlantia and Vinci have high barriers to entry, strong free cash flow and inflation linked pricing. We are attracted to their reasonable valuation multiples and well-supported dividend yields of between 3% and 6%, although this cannot be guaranteed. Growing urbanisation and worsening traffic congestion are likely to underpin long-term demand. Emerging Market peers operate high growth toll roads with well-established concession agreements, providing an essential service to some of the most densely populated regions in the world.

The Fund is also overweight energy Pipelines including TC Energy, Williams and Enterprise Products. These companies own assets connecting North American oil and gas fields with processing facilities and export terminals, positioning them to benefit from rising production levels and energy exports.

The Fund is underweight Multi/Electric Utilities. A number of high quality US names continue to trade at valuations that we find difficult to justify based on company fundamentals. The Fund has also maintained its underweight exposure to Airports, with exposure limited to leading European and Mexican operators. The airport sector faces medium term headwinds following a long period of above-average growth.
